GREEN TEACH PROJECT

The GreenTeach project is focused on environmental sustainability and the fight against climate change, aiming to promote the provision of green and sustainable VET by upskilling educators in the sector by improving their green and sustainable competences reflecting the European dimension and frameworks, as well as their ability to deliver inclusive green learning scenarios based on modern technologies and innovative pedagogy, in order to overcome the skills gap for a sustainable and greener future planet. Innovative VET curricula will develop the qualifications of human resources in the VET sector in line with current global changes and skills needs in the labour market.

TARGET GROUPS:

Direct Target Group (DTG) – individuals and organisations that directly benefit from the results of GreenTeach. DTG includes primary and secondary categories:

Primary – VET teachers in both school and work settings and other VET staff (curriculum developers, career consultants, etc.), Secondary: VET and C-VET

Indirect Target Group – indirect and long-term beneficiaries.

PROJECT OBJECTIVES

The GreenTeach project aims to contribute to the development of a sustainable and green economy in Europe by promoting the introduction of the core principles and concepts of the European Competence Framework for Sustainability, the GreenComp framework and field/sector-specific European and international green and environmental standards in vocational education and training in school and work settings, considering their key role – to prepare the new generation for future job creation in a smart, sustainable and inclusive economy that delivers high levels of employment, productivity and social cohesion. Achieving this goal requires providing flexible training opportunities for VET teachers to develop their green and sustainable development competences,
